Alexander Terentyev

Junior Software Engineer

Antwerp, Belgium | +32485129110 | alex.terentyev.dev@gmail.com
Portfolio website: behavez.github.io | LinkedIn: linkedin.com/in/alexanderterentyev

Professional Summary

Entry-level Software Engineer experienced in C++ and C#. Built projects involving gameplay systems, AI logic, input, collision, and UI, applying solid programming fundamentals and iterative development. Interested in a junior role where I can contribute to real features and continue improving as an engineer.

Featured Projects

Tron BattleTanks, C++ / SDL2 (github.com/BeHaVeZ/FMLEngine-Tron_BattleTanks)

Top-down tank game built with an engine-style SDL2 architecture; implemented gameplay systems, AI movement, collisions, audio, and scene flow.

- Implemented scene/state management (menu, gameplay, highscores) with clean transitions and lifecycle handling.
- Built ECS-style game objects and reusable components (transform/render/collision) to keep gameplay code modular.
- Implemented enemy tank movement using raycasts for wall detection and validated turns using corner probes.
- Implemented highscore persistence (file IO) and a name-entry flow for score submission.

Color a Cube | Unity / C# (https://store.steampowered.com/app/3366710/ColorACube/)

Shipped VR title developed in a professional production environment, with contributions across release support, platform work, reusable systems, debugging tools, and gameplay features.

- Contributed to the release of Color a Cube, supporting development, testing, debugging, and platform-specific improvements.
- Built a reusable achievement system supporting multiple projects and platforms, including Steam**,** Meta and Pico.
- Implemented gameplay features such as painting with a brush, painting with hand-tracking, replay-feature to rewatch how the model was painted.
- Worked with Sentry to track, analyze, and help resolve crashes and technical issues in production.

Shiver Thy Timbers, Unity / C# |
https://wakolat.itch.io/shiver-thy-timbers | https://thegdwc.com/championships/2024-winter/)

Group project where the player controls a ghost haunting a pirate ship, scaring pirates driven by a custom behavior tree system. Selected as a finalist for Best Hobby Game in the GDWC Winter Awards 2024.

- Built AI behaviors using a self-made behavior tree framework (Unity), enabling modular pirate behavior authoring and debugging.
- Integrated navigation and state-driven decision making for NPCs to support common and special pirate roles (e.g., work/rest/wander behaviors) and reactive behaviors when threatened.
- Collaborated in a team setting with iterative development practices and clear task ownership.

Professional Experience

Software Engineer, AlterEyes, Hasselt, Belgium | Sep 2025 – Present

Worked on production features and platform support for shipped VR products, contributing to the release of Color a Cube and helping deliver an end-to-end project for the Pico platform.

- Contributed to the release of Color a Cube, supporting implementation, testing, debugging, and platform-specific improvements.
- Supported the end-to-end Pico delivery, from development and integration to testing and release preparation.
- Improved the development workflow by extending and refining an existing cheat menu package, helping developers debug faster and iterate more efficiently.
- Worked on AI systems and gameplay behavior implementation.

Software Developer Intern, AlterEyes, Hasselt, Belgium | Sep 2025 – Jan 2026

Contributed to internal/product features in a production codebase, collaborating with the team to ship improvements iteratively with strict deadlines.

- Collaborated through Gitea with structured branching and code reviews; communicated progress and tradeoffs using YouTrack following the companies workflow.
- Ported an existing project to platforms like the Steam Deck.
- Created an Achievement System that works across multiple projects and platforms (PS5, Steam, Pico)
- Supported development of new project ideas by rapid prototyping gameplay mechanics to see if it has potential.
- Created tools and systems in a way so that it would be easier for game designers to plug and play.

Key Skills

C++ | C# | Gameplay programming | Platform porting support | Object-oriented programming | Design patterns | Data structures | Algorithms | Debugging | Logging | Refactoring | Agile Workflow | Technical documentation

Education

Bachelor Degree, Game Development, Digital Arts and Entertainment, *Kortrijk, Belgium 2022 - 2026*
Associate Degree, Programming, Artesis Plantijn, *Antwerp, Belgium, 2020-2022*

Technical Proficiencies

Visual Studio | Rider | Unity | Unreal Engine | Perforce | YouTrack | Gitea | CMake | JSON | SQL | Notion | React

Honorable mentions

Tower Trouble, The Rookies | 2024 (*the rookies for the rookie awards 2024)*
Best Hobby Game in the GDWC Winter Awards, GDWC | 2024 (*Best Hobby Game in the GDWC Winter Awards 2024 (featured at 16:30 in the video)*
